

# Sorting Table LBX100

The Lauper LBX100 sorting table is the ideal addition to your packaging solution. Whether as a manual feed directly into the packaging machine or as an additional manual feed option in a complete packaging line with automatic feed systems. The LBX100 sorting tables can be integrated in many ways and adapted to your needs.

## Functionality and Design

Individual components are placed manually on the belt at the sorting table. By confirming the sorted parts on the hand button (Captron), the sorted components are automatically fed - tray by tray - to the packaging machine. Communication and monitoring of the processes is handled by the Lauper LVX packaging machine or the higher-level LauperLink control software.

## Options and Features

- Various sequence programs available
- Timing of the belt with adjustable, variable speed and pause time
- Start with foot and hand switch
- Automatic operation: component recognition in the fan conveyor via optical sensor
- Communication with packaging machine or via Lauper software
